Re: H2S Removal at BOE – South Sioux City Plant

Jason,

Based on a gas flow of 1,600 SCFM, our Peacemaker 14' H2S Scrubber with 1,550 cubic feet of our patented Converting Media Technology will take the following H2S loadings down to zero for the following days:

Once breakthrough occurs, the media will slowly encounter further breakthrough. It will take some time for the effluent to reach the upper spec limit of 667 PPM. I've attached a side view drawing of Peacemaker H2S Scrubber below.

Regards,

Dan L. Falkman
